

## IN THE SPECIFICATION

Please amend paragraph [0015] as follows:

[0015] The present invention comprises an appliance that may both cool and heat food. As seen in Figs. 1-2, the appliance 10 includes a cook vessel 12 and at least one Peltier device 14. The appliance may also include a motive waste side distribution system 16, which may include one or more of a heat sink 18, a fan 20, an air permeable protective cover 22 and/or ducting. A power source 24 provides the necessary energy to operate the Peltier device. Optionally, the cook vessel, the Peltier device and the rest of the components may be contained with a housing 26, where the housing may contain an inner lining 28, insulation 30 and cover 32. The appliance may also contain a control unit 34, one or more sensors (shown schematically at reference numeral 35) such as temperature, current and/or voltage sensors, an interface such as a user interface 36 or a remote interface 38, a display 40 or combinations thereof.
